The present sequence represents Tir, a novel translocated intimin receptor (formerly termed Hp90) from an enterohaemorrhagic receptor (formerly termed Hp90) from an enterohaemorrhagic receptor (formerly termed Hp90) from an enterohaemorrhagic secreted and the pathogens are isolated tir polynucleotide (see AX58859). Tir proteins are secreted by attaching and effacing pathogens such as EHEC and EPEC (see AX706220) E. coli. The bacterial pathogens insert their own receptors into mammalian cell surfaces, to which the pathogen then adheres to trigger additional host signaling events and actin adheres to trigger additional host signaling events and actin be performed by use of antibodies that bind to Tir to detect the protein or the use of antibodies that bind to Tir to detect the protein or the use of nucleic acid probes for detection of nucleic acids, Tir peptides, a recombinant method for producing recombinant Tir, and a kit for the detection of antibodies which bind to Tir, and a kit for the detection of antibodica which bind to Tir, and a kit for the detection of antibodica a protective immune response is also provided. With Tir to induce a protective immune response is also provided. In addition, Tir fusion proteins can be used in attenuated E. coli and the provided immune response is also provided. In addition, the binding of bacterial pathogens to their interfere with the binding of bacterial pathogens to their
                 New translocated intimin receptor useful for treating infection by enteropathogenic or enterohemorrhagic Escherichia coli

                                                                                                                                                                                                                                                                                                                                                                                         Q
```

```
The present invention describes a method of screening for an inhibitor of intimin binding to eukaryotic cells. The method comprises exposing an intimin polypeptide having a Tir-independent cell binding activity to test agents, and obtaining an inhibitor based on its ability to bind the polypeptide. The inhibitors are used in the prevention, treatment and/or diagnosis of bacterial infections, preferably by enteropathic and/or enterohaemorrhagic Escherichia coll, Shiga toxigence E. coll, Hafnia chrein or Citrobacter freundii, or especially E. coll 0157:H7. The infections cause a histopathological effect known as attachment and effacement on intestinal epithelial cells. The inhibitors can be used to produce food supplements or additives, especially where the food is a milk substitute. The method can be used to sort cells based on their ability to bind to a Tir independent cell binding domain of an intimin polypeptide. Polypeptides having Tir-independent intimin binding activity can be used to produce a vaccine against a bacterial disease. The present sequence represents a specifically claimed intimin Creminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New peptide(s) containing the core epitope of Moraxella catarrhalis Usp proteins - useful in, e.g. vaccines to prevent or treat M. catarrhalis infection, and antibodies for passive immunisation.
                                                        sequence represents the N-terminal sequence of Tir (see
                                                                  also AAY06220), a novel translocated intimin receptor from an enteropathogenic Escherichia coli (EPEC) strain. The 78 kDa EPEC protein is secreted by the bacterial pathogen. Diagnosis of disease caused by pathogenic E. coli can be performed by use of antibodies that bind to Tir to detect the protein, or the use of nucleic acid probes for detection of nucleic acids encoding Tir. Kit for the detection of Tir-producing E. coli is provided. Also protective immune response, and a method for screening for compounds which interfere with the binding of bacterial pathogens

treat infections such as otitis media, sinusitis, lower respiratory tract infections such as otitis media, sinusitis, lower respiratory tract infections. They can also be used as immunity enhancers for other bacterial, parasitic or viral antigens, to raise antibodies and as immunoassay reagents for detecting specific antibodies. The antibodies are useful for passive immunisation and as immunoassay reagents. Detection of the epitopic core sequence, by immunoassay or by FCR, is used to ofagnose infection. The USP antigens encoding nucleic acid sequences are also used to produce recombinant proteins and for screening for potential anti-M. catarrhalis agents, while their fragments are useful as diagnostic probes or primers or to isolate variant sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   552

The present sequence represents a Haemophilus influenzae adhesin

(Hia) protein from the type c Haemophilus influenzae strain API.

(Hia) protein from the type c Haemophilus influenzae strain API.

(Hia) genes and proteins have antiinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing correction against disease caused by Haemophilus strains in a susceptible host, preferably a human. An Hia protein is useful as an antigen, in immunogenic preparations including vaccines, as a carrier for other lammonogens, and in the generation of diagnostic reagents. Hia is useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, epiglottitis, septicaemia and otitis media. Recombinant production of Hia favours high recovery of the low recovery of mative protein from Haemophilus influenzae species. A truncated protein has a significantly higher amount of recovery than a full-length protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    el nucleic acid encoding Hemophilus influenzae adhesin protein, for as antigens and vaccines and for treating Hemophilus influenzae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1161 lggtangrndtgtvinkdgltitlangaaagtdasngntisvtkdgisagnkeitnvksa 1220
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1221 lktykdtgntag-atgp---aantaeva-----kgdlvdltkpatgaagngadaka 1267

Its amino acid sequence was deduced from a genomic DNA clone (AAF41476) derived from Haemophilus influenzae type b strain C65. Large quantities of recombinant HA2 can be produced in transformed prokaryotic or eukaryotic host cells, for use in vaccines against

```
This invention describes a novel nucleic acid (I) which has antitumor activity. (I) encode proteins that interact with the Fanconi anemia protein of complementation group A, so may be part of the complex or signal transduction cascade which causes the defect responsible for Fanconi anemia. Polypeptides (II) encoded by (I) are used as immunogens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       proteins,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3 Polypeptide sequences (AAW19629-30 and AAW00918) can be deduced frot the vep ORF1 polyketide synthase (PKS) gene cluster (AAT68715) of Streptomyces venezuelae. The sequence data indicate that the PKS sequence data indicate that the PKS gene cluster encodes a polyene of 12 carbons. The vep gene cluster contains 5 PKS modules, plus a 5' loading module and a 3' end domain. Each of the sequenced modules includes a keto-ACP, an acyltransferase, a dehydratase, a keto-reductase and an acyl carrier protein domain. A novel expression cassette encoding the first module from the vep gene cluster and module 7 from the Streptomyces tylp gene cluster has polyhydroxyalkanoate (PHA) monomer synthase activity and can be used for PHA prodn. in host (esp. insect) cells for use as a biodegradable polymer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              23 PSQTDGAARGGTGHLISST--GALGSRSLFSPLRNSMADSVD---SRDIPGLPTNPSRLA 77

antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating the protein associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy rections. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allastic anaemia, burns, wounds, bone and cartilage damage, necturnal haemoglobinuria, antilniammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.

Compositions comprising the protein, nucleic acid or antibody specific to the protein are useful as pharmaceuticals, e.g. a vaccine composition or a diagnostic composition. The composition is also useful for treating or preventing an infection due to Neisserial bacteria, especially Neisseria meningitidis.

The present sequence represents a Caulobacter S-layer protein used in an example of the present invention. A new DNA construct has been developed which contains at least one restriction site for insertion of DNA upstream of DNA encoding a C-terminal region of at least the last 82 amino acids (aa) of Caulobacter S-layer protein. Caulobacter containing the DNA constructs above additionally containing a sequence encoding a heterologous polypeptide, are particularly useful in live vaccines (where the heterologous polypeptide is an antigen). They can also be used for production of e.g. ligands, enzymes or other proteins, e.g. metallothioneins to remove heavy metals from water or sewage, or xylanase or cellulase for use in wood pulping. All known Caulobacter strains are harmless, and stable in outdoor environments, including water (so suitable for vaccinating fish) or soil. They are well suited for growing in biofilm reactors and produce S-layer proteins, which is an ideal system for presentation of antigens, at high level. Score 132.5; DB 18; Length 1026; Pred. No. 0.086; 4.7%; 21.8%;

The patent discloses a method for cleaving a recombinant fusion protein which is produced by Caulobacter and consists of Caulobacter surface layer (S-layer) protein (containing the C-terminal secretion signal) and a target protein heterologous to Caulobacter. The cleavage of target protein from the S-layer protein is carried out under mild acid protein from the S-layer protein is carried out under mild acid protein so that cleavage occurs at aspartate conditions so that cleavage occurs at aspartate. The cleavage is accomplished while the fusion protein is in The cleavage is accomplished while the fusion protein is in a insoluble aggregate form which facilitates purification of the protein. The method is useful for producing pure proteins including recombinant human and animal therapeutic antibiotic and vaccine peptides, enzymes, protein polymers, and antibacterial enzymes for foodstuffs. The present sequence is a S-layer protein from C crescentus.

The present secretion signal, corresponding to the C-terminal portion of the protein from amino acid 690 onwards, is fused with a target sequence the protein from amino acid 690 onwards, is fused with a target sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          27;

The inversion betacase to an instance and purities nature actual sequence of the inversion to the inversion betacase to an instance of the decision of the eryc gene cluster of Saccharopolyspora erythraea or Streptomyces antibioticus. The invention also relates to a macrolide biosynthetic gene cluster, or fragments thereof. The macrolide biosynthetic gene cluster encodes proteins which synthesise methymycin, parabomycin, narbomycin or a combination of these compounds. Recombinant or augmented cells comprising the desosamine and/or macrolide biosynthetic gene clusters are useful for the production of biologically active macrolides. The macrolide biosynthetic gene clusters are useful for synthesis of methymycin, plkromycin, plkromycin, and narbomycin. The alternative termination of polyketide proteins are useful for synthesis of methymycin, plkromycin, and narbomycin. The alternative termination of polyketide synthesis may be useful to prepare novel antibiotics and polyhydroxyalkanoate (PHA) monomers. The compounds produced by the recombinant host cells are useful as biopolymers, e.g., in packaging or biomedical applications, to engineer PHA monomers synthases or to prepare to biologically active agents to treat asthma, chronic obstructive pulmonary diseases as well as other diseases involving respiratory inflammation, cholesterol-lowering agents or macrolide—based antibiotics which are active against a variety of organisms, e.g., bacteria, including as uniti-dury respiratory pathogens, as well as a particular or the active against a variety of organisms, e.g., bacteria, including as uniti-dury respiratory pathogens, as well as a particular parasition and antibotics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     as viral parasitic pathogens, or as crop protection agents (e.g., fungicides or insecticides) via expression of polyketides in plants. Sequences AAY77181-Y77189 and AAY77199 represent Streptomyces venezuelae ATCC 15439 protein sequences. These are encoded by a DNA sequence designated vep ORF 1, which actually contains 3 open reading frames. The vep ORF 1 protein is defined in the specification as a PHA monomer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           invention relates to an isolated and purified nucleic acid segment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Desosamine and macrolide biosynthetic gene clusters, useful for, e .g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                neomethymycin; narbomycin; polyhydroxyalkanoate monomer synthase; blopolymer; antibiotic; chemotherapeutic; immunosuppressant; asthma, chronic obstructive pulmonary disease; respiratory inflammation; hypercholesterolaemia; crop protection agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Desosamine biosynthesis; macrolide; polyketide; methymycin;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Duff 74E protein - fruit fly (Drosophila melanogaster)
NyAlternate names: ecdysone-induced protein E74B; ets-related protein E74B
C;ppecies: Drosophila melanogaster
C;ppecies: Drosophila melanogaster
C;paccission: S04722; B34692
C;Accession: S04722; B34692
R;Janknecht, R:; Taube, W:; Luedecke, H.J.; Pongs, O.
R;Janknecht, R:; Taube, W:; Luedecke, H.J.; Pongs, O.
R;Janknecht, R:; Taube, W: Lugles
A;Title: Characterization of a putative transcription factor gene expressed
A;Reference number: S04722; MUID:89315191
A;Molecule type: DNA
A;Recession: S04722
A;Molecule type: DNA
A;Residues: 1-883 - AJAN>
A;Residues: 1-883 - AJAN>
A;Residues: EMBL:X15087; NID:g7513; PIDN:CAA33195.1; PID:g7514

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

DOMAIN: TO THE DOMAINS, G1 AND G2, COMPRISE THE AMINO TERMINIS OF THE PROTECGLYCAN, WHILE ANOTHER GLOBULAR REGION, G3, MAKES UP THE COOH TERMINUS. G1 CONTAINS LINK DOMAINS AND THUS CONSISTS OF THREE DISULFIDE-BONDED LOOP STRUCTURES DESIGNATED AS THE A, B, B' MOTIFS. G2 IS SIMILAR TO G1. THE KERATAN SULFATE (KS) AND THE CHONDROITIN SULFATE (CS) ATTACHMENT DOMAINS LIE BETWEEN G3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PTM: CONTAINS MOSTLY CHONDROITIN SULFATE, BUT ALSO KERATAN SULFATE CHAINS, N-LINKED AND O-LINKED OLIGOSACCHARIDES.

DISEASE: DEFECTS IN AGC1 ARE THE CAUSE OF CARTILAGE MATRIX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DEFICIENCY (CMD), AN AUTOSOMAL RECESSIVE SYNDROME CHARACTERIZED BY CLEFT PALATE, SHORT LIMBS, TAIL AND SNOUT. MUTATION IN STRAIN CMD CAUSES ABSENCE OF AGGRECAN BY TRUNCATION OF THE PROTEIN (MUTATION IN THE G1 DOMAIN).
                                                                                                                                                                                                                                                                                                                                                                                                      the aggrecan gene."; nat. 17(1994).

Nat. Genet. 7:154-157(1994).

-I- FUNCTION: THIS PROTEOGLYCAN IS A MAJOR COMPONENT OF EXTRACELLULAR MATRIX OF CARTILAGENOUS TISSUES. A MAJOR FUNCTION OF THIS PROTEIN IS TO RESIST COMPRESSION IN CARTILAGE. IT BINDS AVIDLY TO HALURONIC ACID VIA AN AMINO-TERMINAL GLOBULAR REGION. MAY PLAY REGULATORY ROLE IN THE MATRIX ASSEMBLY OF THE CARTILAGE.

-I- SUBCELLULAR LOCATION: SECRETED; EXTRACELLULAR MATRIX (BY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -!- SIMILARITY: CONTAINS 1 IMMUNOGLOBULIN-LIKE V-TYPE DOMAIN.
-!- SIMILARITY: CONTAINS 4 LINK DOMAINS.
-!- SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.
-!- SIMILARITY: CONTAINS 1 C-TYPE LECTIN FAMILY DOMAIN.
-!- SIMILARITY: CONTAINS 1 SUSHI (SCR) REPEAT.
-!- SIMILARITY: BELONGS TO THE AGGRECAN/VERSICAN PROTEOGLYCAN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                Mouse cartilage matrix deficiency (cmd) caused by a 7 bp deletion in
